

Bera Biyyık

Flutter Developer

As a recent computer engineering graduate with a year of experience in Frontend Development, my journey initially began by developing web frontend projects. However, my path has shifted towards Flutter, where I actively contribute to the development of cross-platform applications. Proficient in creating customized user experiences, I bring a year of practical experience and a strong analytical mindset to my Flutter applications. Eager to continually enhance my skills, I remain dedicated to learning and hands-on application development in the ever-evolving world of Flutter. My career goal is to become an advanced Flutter Developer, staying abreast of the latest technologies and trends while delivering impressive user experiences. I thrive in collaborative environments and am enthusiastic about actively contributing to innovative teams focused on continuous learning
